Mapping as a High Priority Target

1. This meeting was convened to examine the possibility that we might have overlooked high priority targets for mapping.
2. The conclusion of this group was that each of the Services was alerted to make any further investigation which it felt necessary on this question but that pending new information from the Services the Project would understand that previous judgments on targets still stand.
3. In the course of the discussion it was revealed that there are real limitations in the use of AQUATONE photography for mapping purposes because of the lack of adequate geodetic controls.

Timing on Receipt of [redacted] Reports

a one-day, as against a three-day, transmission from Adana to [REDACTED]  
He explained that to provide one-day transmission, while feasible, incurred a heavy burden on Air Force transport and unless really required ought not be used.

5. It was agreed that, in the face of the fact that the Ad Hoc Requirements Committee is not currently urgently calling for [REDACTED] photography but has submitted requirements in the event it is feasible on all scores to make occasional missions, the slower transmission of the film to [REDACTED] would be satisfactory. It was understood that the Ad Hoc Requirements Committee would reserve the right to request more prompt transmission if circumstances warranted.
